

Talking Timer

I recommend this \$10 talking timer to alert you to stop flying so your \$40 lipo pack does not get over discharged. There are many inexpensive meters that show capacity remaining and 15% is a good number to stop flying. Of course the time you set varies on the style of flying you do.

For example.....In a training scenario with the Apprentice S you can try flying for 20 minutes and then measure the capacity remaining. If you have 20% remaining then set the timer for 21 minutes on the next full charge. Remember to stop charging at 90% to extend Lipo cycles. Here is a pic of the timer on my DX5e TX.
