

My DX9 has the latest sounds (version 8 Audio download) and there are over 300 to pick from. Tony Evans recently created a spreadsheet with the old version 7 sounds and added the new version 8 sounds. You can get the list by going to www.wpmpa.com and navigate to Hangar Chatter. You can print out and circle or highlight the sounds you think you might use and this will help you find them later. However you can sort them in alphabetical order using Sound Utilities menu under System Setup. This works with any Spektrum talking transmitter with the latest firmware. By the way the new DX8 Gen 2 comes with the latest firmware. You still have to register to get future firmware downloads.

To do this go to System Setup and 3 lines from the bottom is Sound Utilities. Press the roller once and you will see a menu. Roll down once to Select/Add Category and click it. Next click on Rename/Delete Category and select User. Click Rename and give it your name. Next select Add Sound to Category and go through the list of 300 sounds. This might take some time depending on what you select. I have 64 sounds picked out and it did not take to long. To put them in alphabetical order select Sort Sounds Within Category. Scroll to the sounds starting with A and drag them to the top of the list. Do this until you get to Z and then put the numbered sounds at the end i.e. 3D Mode.

So the next time you can't or don't want to copy a model into a new model go to Custom Voice Setup, Add New Sound Event, Switch Change Report. Change Switch Inhibit to the switch you want to program and flick the switch. Click on position 0 and at the top of the list select the category that you named. Find the sound alphabetically and click it.
